

# 1.1 Apply Properties of Real Numbers

TEKS a.1, a.6

**Before** You performed operations with real numbers.

**Now** You will study properties of real numbers.

**Why?** So you can order elevations, as in Ex. 58.

## Key Vocabulary

- opposite
- reciprocal

## KEY CONCEPT

*For Your Notebook*

### Subsets of the Real Numbers

The *real numbers* consist of the *rational numbers* and the *irrational numbers*. Two subsets of the rational numbers are the *whole numbers* (0, 1, 2, 3, ...) and the *integers* (... , -3, -2, -1, 0, 1, 2, 3, ...).

#### REAL NUMBERS

$\frac{3}{4} = 0.75$	<b>Rational Numbers</b>	$-\frac{1}{3} = -0.333\dots$	<b>Irrational Numbers</b> $\sqrt{2} = 1.414213\dots$ $-\sqrt{14} = -3.74165\dots$ $\pi = 3.14159\dots$
-4	<b>Integers</b>	-1 -27	
0 5	<b>Whole Numbers</b>	16	

#### Rational Numbers

- can be written as quotients of integers
- can be written as decimals that terminate or repeat

#### Irrational Numbers

- cannot be written as quotients of integers
- cannot be written as decimals that terminate or repeat

**NUMBER LINE** Real numbers can be graphed as points on a line called a *real number line*, on which numbers increase from left to right.

### EXAMPLE 1 Graph real numbers on a number line

Graph the real numbers  $-\frac{5}{4}$  and  $\sqrt{3}$  on a number line.

#### Solution

Note that  $-\frac{5}{4} = -1.25$ . Use a calculator to approximate  $\sqrt{3}$  to the nearest tenth:  $\sqrt{3} \approx 1.7$ . (The symbol  $\approx$  means *is approximately equal to*.)

So, graph  $-\frac{5}{4}$  between -2 and -1, and graph  $\sqrt{3}$  between 1 and 2, as shown on the number line below.
