# **CHAPTER REVIEW**

## **Graph Exponential Decay Functions**

pp. 486-491

#### EXAMPLE

Graph  $y = 2\left(\frac{1}{4}\right)^{x+2} - 2$ . State the domain and range.

Begin by sketching the graph of  $y = 2\left(\frac{1}{4}\right)^{k}$ ,

which passes through (0, 2) and  $\left(1, \frac{1}{2}\right)$ . Then

translate the graph left 2 units and down 2 units. Notice that the translated graph passes through

$$(-2, 0)$$
 and  $\left(-1, -\frac{3}{2}\right)$ .

The graph's asymptote is the line y = -2. The domain is all real numbers, and the range is y > -2.  $y = 2 \left(\frac{1}{4}\right)^{x}$ (0, 2) (-2, 0) (-1, - $\frac{3}{2}$ ) (-1, - $\frac{3}{2}$ ) (-2, 0) (-1, - $\frac{3}{2}$ ) (-1, - $\frac{3}{2}$ ) (-2, 0) (-1, - $\frac{3}{2}$ ) (-2, 0

#### **EXERCISES**

Graph the function. State the domain and range.

EXAMPLES 1, 2, and 3 on pp. 486–487 for Exs. 10–12

EXAMPLES

on pp. 493–495 for Exs. 13–16

3 and 5

**10.**  $y = \left(\frac{1}{8}\right)^x$ 

11. 
$$y = \left(\frac{1}{3}\right)^x -$$

4

12. 
$$f(x) = 2(0.8)^{x-1} + 3$$

pp. 492–498

# 7.3 Use Functions Involving *e*

### EXAMPLE

Graph  $y = e^{0.25(x-1)} - 5$ . State the domain and range.

Because a = 1 is positive and r = 0.25 is positive, the function is an exponential growth function. Begin by sketching the graph of  $y = e^{0.25x}$ . Translate the graph right 1 unit and down 5 units.

The domain is all real numbers, and the range is y > -5.

#### **EXERCISES**

Graph the function. State the domain and range.

**13.**  $y = 2e^{-x}$ 

14.  $y = e^{x-2}$ 

- 15.  $f(x) = e^{-0.4(x+2)} + 6$
- 16. **PHYSIOLOGY** Nitrogen-13 is a radioactive isotope of nitrogen used in a physiological test called positron emission tomograph (PET). A typical PET scan begins with 6.9 picograms of nitrogen-13 (1 picogram =  $10^{-12}$  grams). The number *N* of picograms of nitrogen-13 remaining after *t* minutes can be modeled by  $N = 6.9e^{-0.0695t}$ . How many picograms of nitrogen-13 remain after 10 minutes?
