### 12.5 Exploring Recursive Rules

MATERIALS • computer with spreadsheet program

## QUESTION How can you evaluate a recursive rule for a sequence?

A recursive rule for a sequence gives the beginning term or terms of the sequence and then an equation relating the $n$th term $a_{n}$ to one or more preceding terms. For example, the rule $a_{1}=4, a_{n}=a_{n-1}+7$ defines a sequence recursively.

## EXPLORE Find terms of a sequence given by a recursive rule

Find the first eight terms of the sequence defined by $a_{1}=4, a_{n}=a_{n-1}+7$.
What type of sequence does this rule represent?

## STEP 1 Enter first term

Enter the value of $a_{1}$ into cell A1.

| A1 |  |  |  |  | 4 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | A | B | C |  |  |  |  |  |
| 1 | 4 |  |  |  |  |  |  |  |
| 2 |  |  |  |  |  |  |  |  |
| 3 |  |  |  |  |  |  |  |  |
| 4 |  |  |  |  |  |  |  |  |
| 5 |  |  |  |  |  |  |  |  |
| 6 |  |  |  |  |  |  |  |  |
| 7 |  |  |  |  |  |  |  |  |
| 8 |  |  |  |  |  |  |  |  |

STEP 2 Enter recursive equation
Enter the formula " $=\mathrm{Al}+7$ " into cell A2.

| A2 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | $=\mathrm{A} 1+7$ |  |  |  |
| $\mathbf{1}$ | $\mathbf{A}$ | B | C |  |
| 2 | 11 |  |  |  |
| 3 |  |  |  |  |
| 4 |  |  |  |  |
| 5 |  |  |  |  |
| 6 |  |  |  |  |
| 7 |  |  |  |  |
| 8 |  |  |  |  |

## STEP 3 fill cells

Use the fill down command to copy the recursive equation into the rest of column A.

| A8 |  | $=\mathrm{A} 7+7$ |  |
| :--- | ---: | :---: | :---: |
|  | A | B | C |
| $\mathbf{1}$ | 4 |  |  |
| $\mathbf{2}$ | 11 |  |  |
| $\mathbf{3}$ | 18 |  |  |
| $\mathbf{4}$ | 25 |  |  |
| $\mathbf{5}$ | 32 |  |  |
| $\mathbf{6}$ | 39 |  |  |
| $\mathbf{7}$ | 46 |  |  |
| $\mathbf{8}$ | 53 |  |  |

## STEP 4 Identify terms and type of sequence

The first eight terms of the sequence are $4,11,18,25,32,39,46$, and 53 . This sequence is an arithmetic sequence because the difference of consecutive terms is always 7.

DRAW CONCLUSIONS Use your observations to complete these exercises

1. Find the first eight terms of the sequence defined by $a_{1}=4, a_{n}=7 a_{n-1}$.

What type of sequence does this rule represent?
2. Write a recursive rule for the sequence $15,11,7,3,-1,-5, \ldots$.
3. Write a recursive rule for the sequence $81,27,9,3,1, \frac{1}{3}, \ldots$.
4. What equation relates the $n$th term $a_{n}$ to the preceding term $a_{n-1}$ for an arithmetic sequence with common difference $d$ ? for a geometric sequence with common ratio $r$ ?
